

Where to Start?

There is a lot of work that goes into a successful food plot – but sometimes it's difficult to figure out where to begin.

We recommend starting with a soil test, which will give you a summary of what your soil is composed of. Based upon the analysis, you'll be able to figure out which direction to take – in planting, spraying, applying fertilizer, etc.

We offer soil sample testing at our store: Bring us a sample, we'll send it to the lab, results will arrive in less than a week and we will go through recommendations with you!

Pay for your results after they arrive, starting at only \$20/sample.

Food Plot Surge

We're here to help!

With a bait ban going into effect after this January (in some counties, immediately), many hunters are making the shift from baiting with feed to baiting with forage. **Freeland Feed & Lawn** offers all the tools, products, and knowledge needed to get you on the right track – bringing all the bucks right to your field even without the use of feeds and attractants!

Find everything you need from start to finish with us at competitive prices:

- Soil Testing
- Fertilizer
- Spreading/Seeding Equipment
- Herbicides/Pesticides/Fungicides
- Plot Seed: **HUGE** selection – brassicas, clovers, peas, forage, habitat – you name it! Also offer a variety of sizes to fit your needs. If you don't see it – let us order it for you!
